Reproductive and Developmental Toxicology

Ramesh C. Gupta

Reproductive and Developmental Toxicology Ramesh C. Gupta

Reproductive toxicology is a complex subject dealing with three components—parent, placenta, and fetus—and the continuous changes that occur in each. *Reproductive and Developmental Toxicology* is a comprehensive and authoritative resource providing the latest literature enriched with relevant references describing every aspect of this area of science. It addresses a broad range of topics including nanoparticles and radiation, gases and solvents, smoking, alcohol and drugs of abuse, food additives, nutraceuticals and pharmaceuticals, and metals, among others. With a special focus on placental toxicity, this book is the only available reference to connect the three key risk stages, and is the only resource to include reproductive and developmental toxicity in domestic animals, fish, and wildlife.

- Provides a complete, integrated source of information on the key risk stages during reproduction and development
- Includes coverage of emerging science such as stem cell application, toxicoproteomics, metabolomics, phthalates, infertility, teratogenicity, endocrine disruption, surveillance and regulatory considerations, and risk assessment
- Offers diverse and unique *in vitro* and *in vivo* toxicity models for reproductive and developmental toxicity testing in a user-friendly format that assists in comparative analysis
