From Molecules to Networks: An Introduction to Cellular and Molecular Neuroscience

From Molecules to Networks: An Introduction to Cellular and Molecular Neuroscience
An understanding of the nervous system at virtually any level of analysis requires an understanding of its basic building block, the neuron. This book provides the solid foundation of the morphologic, biochemical, and biophysical properties of nerve cells. All chapters have been thoroughly revised for this 2e to reflect the significant advances of the past 5 years. The new edition expands on the network aspects of cellular neurobiology by adding a new chapter, Information Processing in Neural Networks, and on the relation of cell biological processes to various neurological diseases. The new concluding chapter illustrates how the great strides in understanding the biochemical and biophysical properties of nerve cells have led to fundamental insights into important aspects of neurodegenerative disease.

• Written and edited by leading experts in the field, the second edition completely and comprehensively updates all chapters of this unique textbook

• Discusses emerging new understanding of non-classical molecules that affect neuronal signaling

• Full colour, professional graphics throughout

• Includes two new chapters: Information Processing in Neural Networks - describes the principles of operation of neural networks and the key circuit motifs that are common to many networks in the nervous system. Molecular and Cellular Mechanisms of Neurodegenerative Disease - introduces the progress made in the last 20 years in elucidating the cellular and molecular mechanisms underlying brain disorders, including Amyotrophic Lateral Sclerosis (ALS), Parkinson disease, and Alzheimer’s disease.

• Companion website for students provides quizzes to aid their comprehension of this material. Manual site for instructors provides figures in Powerpoint and solutions to quizzes.

From reader reviews:

Zachary Mason:

What do you in relation to book? It is not important along? Or just adding material if you want something to explain what yours problem? How about your spare time? Or are you busy individual? If you don't have spare time to accomplish others business, it is give you a sense of feeling bored faster. And you have spare time? What did you do? Every person has many questions above. They must answer that question since just their can do that. It said that about guide. Book is familiar in each person. Yes, it is appropriate. Because start from on jardín de infancia until university need this specific From Molecules to Networks: An Introduction to Cellular and Molecular Neuroscience to read.

Daisy Richardson:

Do you considered one of people who can't read pleasant if the sentence chained in the straightway, hold on guys this particular aren't like that. This From Molecules to Networks: An Introduction to Cellular and Molecular Neuroscience book is readable by means of you who hate the perfect word style. You will find the facts here are arrange for enjoyable examining experience without leaving possibly decrease the knowledge that want to supply to you. The writer connected with From Molecules to Networks: An Introduction to Cellular and Molecular Neuroscience content conveys prospect easily to understand by a lot of people. The printed and e-book are not different in the written content but it just different by means of it. So , do you nonetheless thinking From Molecules to Networks: An Introduction to Cellular and Molecular Neuroscience is not loveable to be your top listing reading book?

Bobbi Wilkinson:

Your reading 6th sense will not betray you actually, why because this From Molecules to Networks: An Introduction to Cellular and Molecular Neuroscience book written by well-known writer who really knows well how to make book that may be understand by anyone who read the book. Written with good manner for you, still dripping wet every ideas and publishing skill only for eliminate your hunger then you still question From Molecules to Networks: An Introduction to Cellular and Molecular Neuroscience as good book not only by the cover but also from the content. This is one publication that can break don't judge book by its handle, so do you still needing an additional sixth sense to pick that!? Oh come on your looking at sixth sense already told you so why you have to listening to another sixth sense.

William Brown:

Reading a book being new life style in this calendar year; every people loves to examine a book. When you examine a book you can get a lots of benefit. When you read guides, you can improve your knowledge, simply because book has a lot of information upon it. The information that you will get depend on what kinds of book that you have read. If you wish to get information about your analysis, you can read education books, but if you want to entertain yourself you are able to a fiction books, this kind of us novel, comics, in

addition to soon. The From Molecules to Networks: An Introduction to Cellular and Molecular Neuroscience provide you with new experience in reading a book.
