**Researching Biology and Evolution in the Gulf States: Networks of Science in the Middle East (Library of Modern Middle East Studies)** Matthias, Jörg Determann
Officials and religious scholars in the Gulf states have repeatedly banned the teaching and researching of the theory of evolution because of its association with atheism. But Jörg Matthias Determann argues here that, despite official prohibition, research on biological evolution has flourished, due in large part to the development of academic and professional networks. This book traces these networks through the history of various branches of biology, including botany, conservation research, ornithology and palaeontology. Typical of rentier societies, some of the scientific networks in this region consist of vertical patron-client relationships. For example, those in power who are interested in wildlife conservation have been known to offer patronage to biologists working on desert ecology. However, just as important are the horizontal links between scientists both within the Gulf region and beyond.

Because most accounts of evolution explained the development of species without referring to divine action, the theory of evolution also became associated with atheism. The theory thus also became one of the most prominent flashpoints between modern science and Abrahamic religions. In Saudi Arabia, not only religious, but even science textbooks by the Ministry of Education promote an account of life's creation by God. But through interviews with biologists working in the Gulf monarchies and through analysis of their publications, Determann finds that it has been possible for some researchers to support the theory of evolution in an environment which has been shaped by official challenges to the theory.

By asking what has enabled these scientists to incorporate the theory into their work, he offers a new perspective on science in the Middle East: examining the work and lives of individuals rather than just focusing on the state and its policies. Researching Science in Arabia furthermore provides the argument that through the work of these individuals, we should look at the Arab world as an area interconnected with global science, and therefore fully integrated into the scientific and technological advances being pioneered worldwide.

**From reader reviews:**

**Kelly Watson:**

Nowadays reading books are more than want or need but also be a life style. This reading routine give you lot of advantages. The huge benefits you got of course the knowledge your information inside the book this improve your knowledge and information. The info you get based on what kind of publication you read, if you want get more knowledge just go with education books but if you want experience happy read one together with theme for entertaining for instance comic or novel. The actual Researching Biology and Evolution in the Gulf States: Networks of Science in the Middle East (Library of Modern Middle East Studies) is kind of publication which is giving the reader capricious experience.

**Robert Haas:**

Playing with family in a very park, coming to see the sea world or hanging out with buddies is thing that usually you have done when you have spare time, after that why you don't try point that really opposite from that. One activity that make you not feeling tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of knowledge. Even you love Researching Biology and Evolution in the Gulf States: Networks of Science in the Middle East (Library of Modern Middle East Studies), you are able to enjoy both. It is very good combination right, you still want to miss it? What kind of hangout type is it? Oh can happen its mind hangout fellas. What? Still don't understand it, oh come on its called reading friends.

**Kirsten Ferguson:**

It is possible to spend your free time you just read this book this publication. This Researching Biology and Evolution in the Gulf States: Networks of Science in the Middle East (Library of Modern Middle East Studies) is simple to bring you can read it in the park, in the beach, train in addition to soon. If you did not have got much space to bring the particular printed book, you can buy often the e-book. It is make you easier to read it. You can save often the book in your smart phone. Consequently there are a lot of benefits that you will get when you buy this book.

**James Rohrbach:**

A lot of guide has printed but it differs from the others. You can get it by online on social media. You can choose the best book for you, science, amusing, novel, or whatever through searching from it. It is referred to as of book Researching Biology and Evolution in the Gulf States: Networks of Science in the Middle East (Library of Modern Middle East Studies). Contain your knowledge by it. Without leaving behind the printed book, it can add your knowledge and make a person happier to read. It is most critical that, you must aware about publication. It can bring you from one place to other place.
