Timber in the City

Timber in the City
As synthetic materials and mutant and hybrid concoctions attain prominence in our daily lives?in our handheld devices, cooking utensils, vehicles, even things as simple as our shopping bags?the design and construction industries have instead re-embraced the familiar, the conventional?wood, which has regained prominence through innovations in engineering and construction methodologies. Technology is now commonly used?and often (though not always) affordably used?to cut, perforate, assemble, erect, and even fabricate materials in a manner not previously possible. Wood is one such material, and Timber in the City documents both the imaginings of those in the nascence of their education and practice and the executed work of design professionals at the leading edge of architecture. These designers, regardless of the duration of their immersion in the field, have imaginatively rethought the means by which we build and the methods by which we define space merely through differing deployments of a familiar building material.
