Studies in Natural Products Chemistry: Chapter 6. Progress in the Syntheses of Dibenzocyclooctadiene Lignans Junbiao Chang, Chuanjun Song
The concept, origin, and classification of lignan will be briefly introduced first, which will lead the readers naturally to dibenzocyclooctadiene lignan. The properties of dibenzocyclooctadiene lignan will then be introduced, including the axial chirality, the substitution pattern on the aromatic ring, etc. Next, a detailed list of the structures of dibenzocyclooctadiene lignan isolated so far will be provided. Next, we will turn to the most important part—synthesis. The general strategies for the formation of the eight-membered ring will be introduced first. Detailed examples will then follow, which is not aimed to provide a full list of dibenzocyclooctadiene lignan syntheses, but mainly focus on different strategies. However, all the references for the synthesis of different compounds with similar strategy will be provided. Recent advances on the asymmetric synthesis will be our main concern for this part.
